

# Silver Recovery

City Regulations  
mandate a  
change in silver  
recovery systems  
every 6-12  
months\*\*

Silver recovery  
systems for used fixer

Fiber drums for exposed film

Silver Reclamation services have been offered by Rocky Mountain Radiographics since 1968.

We burn the film, destroying it in a method that is **HIPPA** compliant. Silver is then reclaimed from the ash. We provide free fiber drums for transporting the used film to our warehouse. Your payment is based on the quantity of silver recovered and the current silver market when your silver is sold.\*

For the exhausted fixer, we offer either passive recovery systems or electrolytic units that offer disposable anodes for ease of operation.

*\*Dry Laser film has minimal silver content.*

*\*\* Please check with your local water department for complete regulation guidelines.*
